The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply							
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-2 are rejected under 35 U.S.C. j 103(a) as being unpatentable over Ishibashi et al. in view of Bush.

Ishibashi et al. discloses the claimed structural limitations of a splined connection assembly (see Figs. 14-16) comprising a splined shaft 16 having a plurality of male splines 15 formed thereon, a receiving member 14a having a plurality of mating female splines 13 formed thereon, and a plurality of radially equispaced, axially extending, two-part elongate members 28 for providing a radial force to compensate clearance deviations between the mating male and female splines. Further, the receiving member 14a is provided with a plurality of corresponding wider openings I 3a for accommodating the two-part elongate members 28 therein. However, Ishibashi et al. fails to show the elongate members 28 being C-shaped or tubular with the receiving member 14a having a plurality of corresponding openings thereon to retain the C-shaped or tubular elongate members. Bush teaches a similar connection assembly between a receiving member 50 having a plurality of axially extending C-shaped openings 64 thereon and a mating shaft member 38 wherein a plurality of radially equispaced, axially extending, one-piece, C-shaped or tubular, elongate members 32 is disposed in the axially extending openings

Application/Control Number: 09/901,400 Page 3

Art Unit: 2116

64 of the receiving member to provide a radial force for compensating clearance deviations between the mating members. Therefore, as taught by Bush, it would have been well within the purview and obvious to one of ordinary skill in the art at the time the invention was made to facilitate assembly and to enhance the overall cost-effectiveness of the splined connection assembly of Ishibashi et al. by substituting the two-piece elongate members and the corresponding openings in the receiving member with the simpler and easier to use one-piece, C-shaped or tubular, elongate members and the corresponding openings in the receiving member to effectively compensate clearance deviations between the mating members.

# Response to Arguments

- 2. Applicant's arguments filed 6/4/05 have been fully considered but they are not persuasive. In response to applicant's arguments, the recitation the universal joint has not been given patentable weight because the recitation occurs in the preamble. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See *In re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951).
- 3. In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208

Art Unit: 2116

USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

4. In response to applicant's argument that the Bush patent is nonanalogous art, it has been held that a prior art reference must either be in the field of applicant's endeavor or, if not, then be reasonably pertinent to the particular problem with which the applicant was concerned, in order to be relied upon as a basis for rejection of the claimed invention. See *In re Oetiker*, 977 F.2d 1443, 24 USPQ2d 1443 (Fed. Cir. 1992). In this case, Bush is teaching the use of single piece elongated connector over the use of two pieces and would be within the level of ordinary skill in the art at the time the invention was made.

### Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 2116

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John R. Cottingham whose telephone number is (571) 272-7079. The examiner can normally be reached on Monday - Thursday, alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lynne Browne can be reached on (571)272-3670. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
